

2004: New Hampshire Use Support Status for Shellfishing

NOTES:

1. See the 2004 Consolidated Assessment and Listing Methodology (CALM) for details regarding how assessments were made.
2. In New Hampshire, shellfish consumption advisories due to mercury are in effect for all tidal waters. Water impaired by mercury advisories were assessed as not supporting for shellfish consumption and were intentionally not shown on this map so that the underlying use support could be presented.
